Service Tips

The clutch is designed to turn the compressor on and off. This is achieved by controlling the voltage to an electromagnetic coil that engages or disengages depending on the demand of the evaporator thermostat.

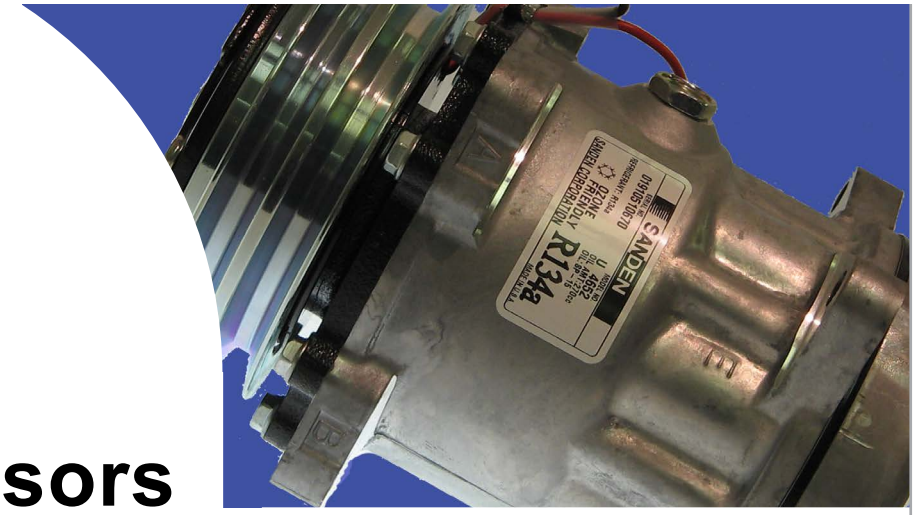

Clutch Service Tips	
Verify Clutch Engagement	With the engine running and the A/C on full, verify the clutch is engaging/disengaging.
	With a jumper wire hooked up from a reliable power source, the clutch plate should engage. If not, the plate is deffective.
Field Coil	Open circuit in field coil will show during resistance check.
Pulley & Belt	The pulley and belt should be aligned and free of any noise or slippage
Rotor	The rotor should be free of any signs indicating rubbing on the field coil outer diameter.

WHAT IS THE FLX 7?

SD7H15 Durability

The FLX7 starts w/ the same SD7H15 compressor known throughout the automotive industry for its performance and durability.

FLX7 Features and Benefits

The FLX7 is an optimized version of the SD7H15 compressor which utilizes interchangeable parts to increase flexibility and adaptability to a variety of automotive applications. FLX7 compressors come standard w/ enhanced features previously found only on premium compressors. Features and benefits include:

- ***Fewer Part Numbers.*** The FLX 7 uses a common body and interchangeable parts to consolidate hundreds of existing part numbers into just 23 models.
- ***Reduced Inventory Costs.*** The consolidation of part numbers provides an opportunity to stock a single FLX 7 compressor instead of dozens of models.
- Fewer part numbers means the number of service parts required to inventory for field replacement is also decreased.
- ***Expanded Product Configurations.*** The FLX 7 allows for the creation of compressor configurations not previously offered by Sanden.
- Each FLX7 comes w/ both a Bullet and sealed Packard clutch lead Wire terminal for application flexibility
- For protection, every FLX7 comes equipped w/ a pressure relief valve to guard against abnormal pressure conditions. A field coil diode is also included to prevent electrical damage caused by voltage surges.
- The FLX7 uses a standard GM pad-style Cylinder head which receives a variety of port fittings ready to accommodate vertical and horizontal hose attachment. The port fittings are sold separately from the compressor, allowing the user to adapt a single compressor to fit many applications.
- Each port fitting is made of forged steel for superior strength vs. cast iron fittings. The fittings have threaded ports ready to receive an R12 or R134a charging valve.
- FLX7 models come w/ mineral oil for use w/ R12 systems or PAG oil for use w/ R134a systems eliminating the need for retrofitting.
- Heavy Duty rotor bearings to handle higher pressure / loads.
- A variety of clutch rotor configurations sealed heavy-duty and multi-groove rotors are available in 12 volt and 24 volt options:

  125mm, A2
  119mm, PV10
  122mm, A1 (Overhang)
  152mm, A2
  158mm, C1
  119mm, PV8
  119mm, PV8(SHD)
  138mm, A1

- Port Fitting sizes available:

  Horizontal 3/4 x 7/8
  Vertical 3/4 x 7/8
  Vertical 3/4 x 7/8 Flare
  Vertical 1 x 14
  Horizontal 1 x 14

FLX 7 Features

FLX 7 features include:

- *7 Cylinders for reduced operating pulsations, reduced noise, and improved performance.*
- *Available in ear mount or direct mount configurations for flexibility and adaptability over a broad range of applications.*
- *Superior lubricating system for increased durability and high temperature performance.*
- *Heavy-duty bearing to handle higher pressures and loads.*
- *Shaft seal for greater leak protection and durability.*

FLX 7 Typical Applications

FLX7 models are designed for use w/:

- *Light Passenger Vehicles*
- *Medium Duty and Heavy Trucks*
- *Agricultural Vehicles*
- *Passenger Buses*
- *Construction Vehicles*

Service Tips

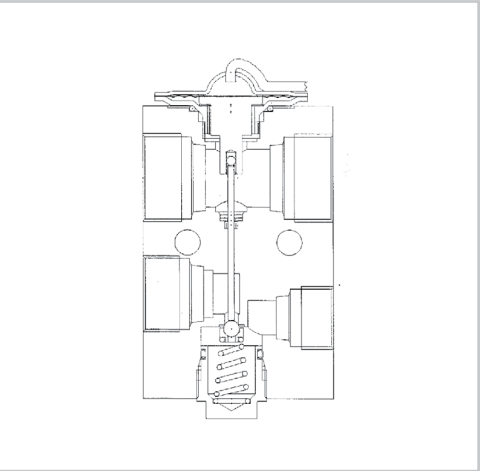

Service Tips

The expansion valve acts as a refrigerant metering device that creates a temperature/ pressure drop. This device also divides the system into two zones; high-pressure and low-pressure.

Expansion Valve Service Tips	
Block Valve Failure	The most common block valve failure is due to the loss of gas pressure inside the Power Head.
Plugged Expansion Valve	Plugged expansion valves cannot be flushed out, they must be replaced.
Capillary Tube	Verify the capillary tube is properly attached and insulated.
Externally Equalized Tube	Replace in the same place as the old tube.
Refrigerant Check	Ensure that refrigerant is flowing to the expansion valve prior to removing.
Tip	Expansion valve is normally replaced when the compressor is replaced.

Multi-Flow Condensers

The Multi-Flow design was created to make a very efficient condensing unit in a compact yet sturdy package. The first all-aluminum multi-flow condenser provides quality and innovation that marked the initial launch of this remarkable product. All the multi-flow condensers are USA made with all the skill and quality of American labor and materials under exacting quality and performance standards.

- **22mm design** - Gives you 33% more capacity when compared to traditional 16mm condenser of the same length and width
- **Thin Cross Tube Profile** - Decrease air resistance for improved engine cooling
- **Louvered Fins** - designed to provide heat transfer due to improved airflow
- **Patented End Tanks** - manufactured from a specially designed one-piece extrusion for extra strength and durability
- **Zinc Coating** - on the fins and cross flow tubes to improve corrosion resistance and maintain superior heat exchange capability
- **Nocolok Oven Brazing** - Patented process in which all aluminum parts are oven brazed to create homogenous assembly with joints that are leak free and reliable
- **Unitized construction** - A special fin support plate at the top and bottom bolsters structural integrity
- **Pre-punched side mounting flanges** - for mounting ease and flexibility

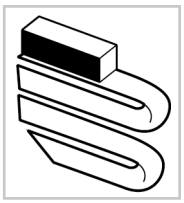

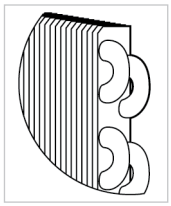

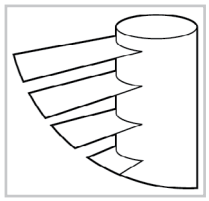

Flexible and Rugged

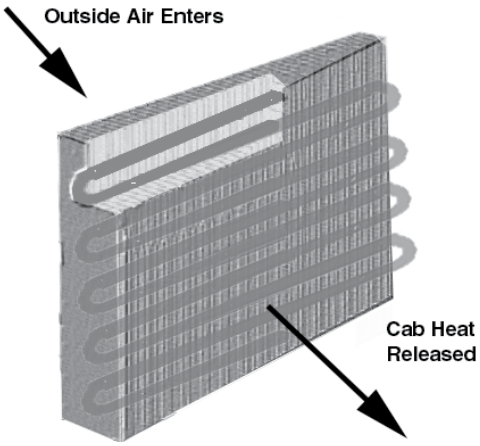

The compact design, high-heat transfer capability and side mounting flanges combine to make a very versatile unit to fit a wide variety of applications. Since one unit can fit a variety of vehicles, your inventory investment can go way down and still maintain more than adequate coverage. The performance of this condenser also offers advantages in terms of cooling capablitiy over an equivalent size drop-in replacement given the same operating conditions. The robust contruction ensures that the unit will stay on the vehicle for years in good operating condition with no “come-backs” to worry about.

Typical Header Types

Type 1	Type 2	Type 3	Type 4
			
SERPENTINE	**TUBE AND FIN**	**GRILLDENSER**	**PARALLEL FLOW**
Continuous extruded aluminum tube, 3/4 to 2 inches thick. The fin is either Skyve type or vacuum brazed ribbon type spaced approximately 14 fins per inch. High heat rejection, compact size exact OEM replacements.	Constructed with .008 thick aluminum corrugated fin 3/4 to 2 1/2 inches thick. Fin spacing at 10 to 12 fins per inch providing maximum heat rejection. Tubes are either copper or aluminum.	Constructed with .030 to .050 thick aluminum, fins are 3/4 inch thick. Fins are spaced at 2 to 4 fins per inch providing minimal air flow restriction. Tubes are either .035 inches wall aluminum or .022 inches wall copper.	Constructed with tube assemblies connecting to a common tank at both ends of the condenser. Commonly found in smaller, newer R-134a vehicles with limited air flow. Offers superior heat rejection.

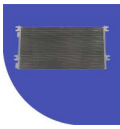

Service Tips

Condenser

The condenser is designed to exchange heat. Heat is released outside the cab by the condenser.

Condenser Coil Service Tips	
Condenser Location	The condenser is located on the high-pressure side of the system, in front of the radiator.
Coil Fins	Make sure the coil fins are clean and free of debris and obstructions.
Inspect for Damage	Inspect for abrasions or damaged tubing. Straighten bent fins with fin comb.
Operating Temperature	With the system running the condenser will be hot to the touch.
Ensure Operability	Ensure the condenser fan is operable.
Temperature Change — Inlet to Outlet	The condenser will achieve a 15° - 30°C temperature decreases from inlet to outlet.
Tip	Air flow should hold shop rag onto the condenser coil.

Heater Core

The heater core is designed to heat the inside of the cab.

Heater Core Service Tips	
Heater Core Location	The heater core is located inside the cab under the dash.
Core Fins	Make sure the coil fins are clean and free of debris and obstructions.
Inspect for Damage	Inspect for abrasions or damaged tubing. Straighten bent fins with fin comb.
Operating Temperature	With the system running the heater core will be hot to the touch.
Ensure Operability	Make sure the blower motor is operable.
Tip	A stuck open water valve will diminish the A/C performance. Weak hose connection may cause leakage. Check recirculation filter for cleanliness, a clogged recirculation filter will impede HVAC performance.

Binary Pressure Switches

This switch assembly performs two distinct functions. The first function prevents the compressor from operating if system charge is lost or ambient temperature is too low. The second stops compressor if head pressure increases to unsafe levels. It automatically resets when pressure drops back to normal.

Install binary on liquid side of A/C system between condenser and expansion valve, for use with R-12 and R-134a systems.

Binary Pressure Protection		
Low Pressure	30 - 15 Psi (Falling Pressure)	40 Psi (Rising Pressure)
High Pressure	270 - 330 Psi (Rising Pressure)	80 - 120 Psi Below (Opening Pressure)

Pressure Switches

Trinary Pressure Switches

This switch assembly performs three distinct functions. The first function prevents the compressor from operating if system charge is lost or ambient temperature is too low. The second stops compressor if head pressure increases to unsafe levels. It automatically resets when pressure drops back to normal. The third function is a shutter/fan override switch that keeps head pressure within normal range by opening shutters or operating engine fan to increase air flow across condenser when head pressure rises above set valve.

Install trinary on liquid side of A/C system between condenser and expansion valve, for use with R-12 and R-134a systems.

Trinary Pressure Protection		
Low Pressure	22.5±7.5 Psi (Falling Pressure)	40 Psi (Rising Pressure)
High Pressure	325±25 Psi	230±20 Psi Below (Opening Pressure)
Shutter/Fan Override	35 - 60 Psi Below (Closing Pressure)	200 - 230 Psi (Rising Pressure)

AIR-O-CRIMP Fittings

AIR-O-CRIMP Assembly

Cut or trim the hose.

Cut or trim the hose to the desired length using the kwikcut hose cutter. The cut should be made square to the hose length.

Assemble the clamp.

Assemble the clamp assembly onto the hose with the locator tab positioned approximately where the fitting groove will be when the fitting is assembled.

Apply refrigerant oil.

Apply a small amount of refrigerant oil (PAG or Ester) to the fitting barb and o-rings (optional). Assmeble the fitting into the hose until hose touches the ramped step on the fitting. Adjust the clamp assembly so the tab on the locator “snaps” into the groove of the fitting.

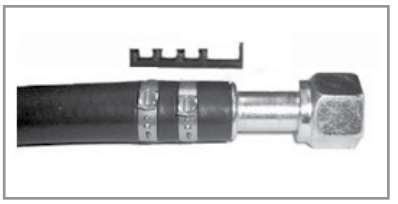

Crimp clamps.

Using the air crimp gun or the manual crimp pliers, crimp each clamp separately.
Caution: If using the manual pliers, make sure that there is a metal to metal contact of the clamp ear when the crimp is made. There will be a slight amount of spring-back of the clamp ear when the crimp pliers are released. Failure to fully close the clamp may result in refrigerant leaks.

Locator comes off.

The locator will “pop off” after the second clamp is crimped and can be discarded. The result is a clean appearance and a reliable assembly.

CORRECT BUBBLE CRIMP

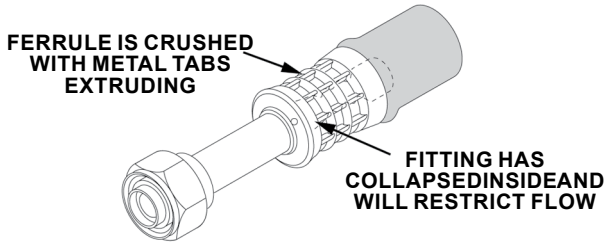

CORRECT BUBBLE CRIMP

INCORRECT BUBBLE CRIMP

OVER CRIMPING

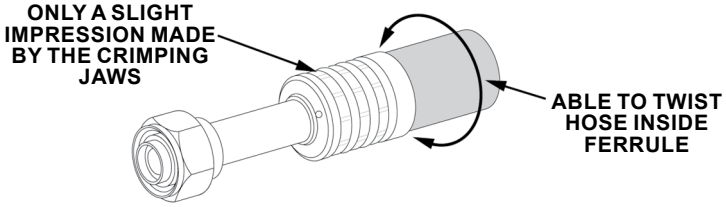

Can damage inner lining and/or fitting due to over torque or wrong size crimping die selection.

INCORRECT BUBBLE CRIMP

UNDER CRIMPING

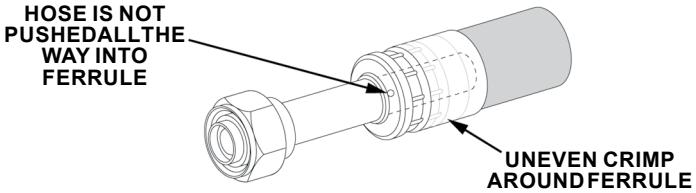

Can cause hose to blow off fitting due to wrong die size selection or under crimping. Typically hose will rotate easily if fitting is under crimped.

INCORRECT BUBBLE CRIMP

UNEVEN CRIMPING

Caused when hose is not pushed all the way into ferrule. Can cause hose to blow off due to insufficient number of crimps on ferrule/

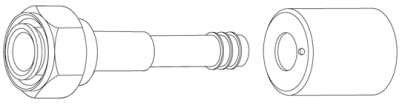

Hose Crimping Procedures

CRIMPING PROCEDURES FOR TYPICAL MOBILE REFRIGERATION HOSE:

STEP 1 Determine hose size needed. (See “Beadlock Fitting Identification”, “Goodyear (Galaxy) Hoses” on page 504.)

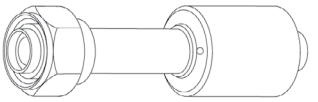

STEP 2 Determine hose fitting size and type needed.

TYPE A
TWO PIECE FITTING

BARBED TYPE FITTING — SEPARATE FERRULE

TYPE B
ONE PIECE FITTING

BEADLOCK TYPE FITTING

STEP 3 Make certain that the end of hose to be crimped is cut evenly.

CORRECT EVEN CUT

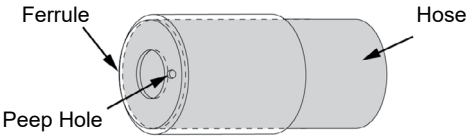

INCORRECT ANGLED CUT

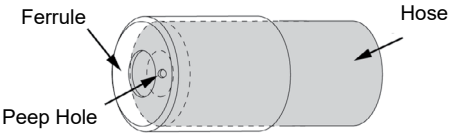

INCORRECT ANGLED CUT

STEP 4 Push hose ALL the way into ferrule until hose is flush with peephole at the end of the ferrule.

CORRECT DEPTH

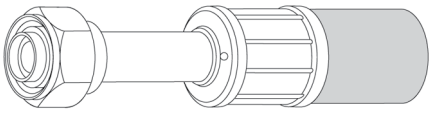

INCORRECT DEPTH

NOTE: It may be necessary to lubricate the hose inside diameter and/or hose fitting barbs

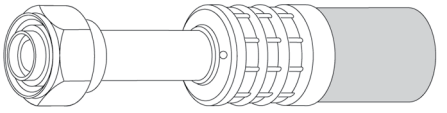

STEP 5 Determine correct crimping die size to match hose and fitting size. There are basically two types of crimp styles (see below).

FACE LONG CRIMP

TYPICALLY UTILIZED WITH 2 PIECE TYPE FITTINGS AND ALL RUBBER HOSE

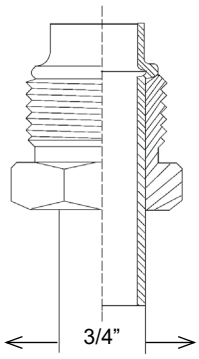

BUBBLE CIRCULAR CRIMP

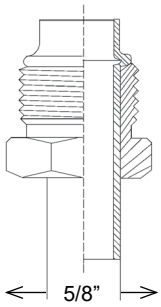

TYPICALLY UTILIZED WITH 1 PIECE BEADLOCK TYPE FITTINGS AND BARRIER NYLON/RUBBER HOSE

STEP 6 Crimp hose/fitting based on specific crimping machine manufacturer’s recommendations. Reference the following illustrations for some common examples of correct and incorrect crimping.

F-Series

The F-Series is our line of filter/pressurizers. In this series you can find anything from stand-alone self-cleaning filter packages to simple canister-like add-on filters.

We've designed the series using some of the industry's most efficiient filter media available and with efficiency ratings of 99% on particle sizes 0.5 microns and above.

Filtration & Pressurization Systems

In addition to dust filters, the following options are also available:

- Filters which remove gaseous contaminants often generated at industrial processing sites in enclosed spaces (such as underground mining)
- A wide range of electrical supplies to suite site availablility
- Larger capacities
- New air conditioning equipment that has higher capacity in cooling, heating and also has heavily upgraded filtration systems to be compatible with higher standards of indoor air quality
- Air compressor/receiver sets to suit self-cleaning filters

Bergstrom Parts warrants its HVAC replacement parts installed in off-road vehicles against any defects in material and / or workmanship for a period of one year from date of original installation or 1,500 hours, whichever comes first. In the event that a defect is discovered during the warranty period, Bergstrom Parts agrees that, at its option, it will repair, replace or credit the defective product, when returned, transportation prepaid to Bergstrom Parts. Any product repaired or replaced under this warranty will be warranted only for the remainder of the original product's warranty period. The Bergstrom Parts warranty does not apply to normal maintenance items, consumable products or components such as, but not limited to belts, hoses, compressor shaft seals, gaskets, clutch and compressor bearings, valves, receiver dryers, chemicals, oils, bulbs and filters.

WARRANTY LIMITATIONS

The above warranty does not apply to any complete Bergstrom proprietary unit or component which, after shipment by Bergstrom: shall have been repaired or altered outside of Bergstrom's factory in any way so as, in Bergstrom's judgment, to adversely affect its operation; shall have been subject to misuse, negligence, accident or damage; shall have been installed contrary to recommended installation practice in any way or shall have been used in conjunction with other Bergstrom system components, so as, in Bergstrom's judgment, to adversely affect its operation. It is common for installers to use components from several different manufacturers. If these component substitutions result in the failure of Bergstrom Systems, Units or other Parts, the Bergstrom Part will not be covered. Alteration, substitution of components and/or parts, or improper installation shall make null or void any warranty, express or implied. The Bergstrom Parts warranty is the sole property of the original owner-user-consumer and is not transferable. A transfer of ownership shall terminate / void any remaining warranty. Problems arising from improper installation are the responsibility of the installer and are not covered by the Bergstrom warranty. Bergstrom reserves the right to make change or improvements in design or product, without thereby obligating itself to install the same operation upon its products previously manufactured. No representative of Bergstrom, except an authorized officer, not any Bergstrom distributor or dealer, has authority to change or extend the warranty in any manner whatsoever.

WARRANTY DISCLAIMER

The warranties printed above are the only warranties applicable to the order or the goods. All other warranties, express or implied, including but not limited to the implied warranties of merchantability and fitness for a particular purpose, are disclaimed.

LIMITATION OF LIABILITY

Bergstrom parts shall not be liable, whether in contract, in tort, under any warranty, in negligence, or otherwise, for incidental, consequential or special damages, including without limitation costs of removal or shipment, damage to vehicles, contents or product cargo, expenses for towing, rentals or expenses incurred from the failure of any unit or parts thereof to operate properly, labor, refrigerant or loss of profits involved in the replacement of a failed part, injury or damage to trucks, contents, or persons by reason of installation of any Bergstrom product or its mechanical failures or otherwise, including any tort liability for negligent design nor manufacture of this product. Under no circumstances shall Bergstrom parts' liability or buyer's remedy for damages against Bergstrom parts exceed the amount of the purchase price of goods sold for which or relating to which claim is made. In the event that Bergstrom parts' warranty, if any, or any other obligation of Bergstrom parts applicable to the goods fails of its essential purpose, buyer's exclusive remedy shall be limited to return of or credit for so much of the purchase price as is applicable to the goods which are nonconforming or defective, provided such goods are returned to Bergstrom parts. The price stated for the goods is based upon and in consideration for limiting Bergstrom parts' liability. No action arising out of the order or pertaining to the goods may be brought by buyer more than fifteen (15) months after the date of shipment of the goods by Bergstrom parts to buyer. Buyer's remedies as provided herein are its sole and exclusive remedies.

LIMITATION OF REMEDIES

Some states within the United States do not allow the disclaimer of implied warranties and if this is true in your state the above limitation may not apply to you. This warranty gives you specific rights, and you may have other rights that vary from state to state.
